General information

Introduction to the Bike BREX DM

The Bike BREX data module has primarily been developed to

- serve as an example of how a BREX data module is meant to be used
- to control and guide the continuous development of the Bike data set

The Bike BREX will be subject of continuous enhancements to ensure that each new specification issue is appropriately represented in the BREX module.

Description

1 Physical description of a bicycle

A bicycle (refer to Fig 1) is a frame and a number of movable components with mechanical parts that are completely open. There are no covers or sheet metal panels that prevent access to the mechanical parts. Thus, you can disassemble the different components of a bicycle (refer to Fig 1 [0]) to do:

- an inspection
- a maintenance task
- a repair task

ICN-S1000DBIKE-AAA-D000000-0-U8025-00536-A-04-1 *Fig 1 Complete bicycle*

The parts that you can immediately identify on a bicycle are given in Table 1.

Table 2 Bicycle parts

Description

1 Functional description of a bicycle

Below is a list of the different bicycle components and a functional description of them.

Frame
The frame is the skeleton of the bicycle. Refer to \$1000DBIKE-AAA-DA3-00-00-00AA-041A-A for a functional description of the frame system.

Wheel
The wheel is the point of contact between the bicycle and the road for the bicycle to have movement. Refer to \$1000DBIKE-

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

S1000DBIKE-AAA-D00-00-00-00AA-042A-A

AAA-DA0-00-00AA-041A-A for a functional description of the

wheel.

Spokes The spokes are thick wires with tension applied that connect the

hub to the rim. You can adjust the tension with the nipple on the

rim side.

Hub The hub attaches to the center of the wheel where the axle and

the bearings are.

Metal rim The metal rim is a metal ring that has a U-shaped cross section

to hold the spokes on the inner side and the tire on the outer

side.

Seat The Seat, which is also known as the 'saddle', is used as the

support platform for the person to sit on the bicycle.

Seat post The Seat post is used as a support post for the seat and to

change the height of the seat for the rider.

Handle bar The handle bar is a horizontal bar with handles on each

end. The handle bar is a steering mechanism that the rider uses to change the direction of the bicycle. The brake levers are also on the handle bar. Refer to \$1000DBIKE-AAA-DA2-20-00-00AA-720A-A for information on how to install the handle bar. Refer to \$1000DBIKE-AAA-DA2-20-00-00AA-520A-

A for information on removing the handlebar.

Handle bar stem (the stem) attaches the handle

bar to the steering tube. Refer to S1000DBIKE-AAA-DA2-10-00-00AA-720A-A for information on how to install a stem. Refer to S1000DBIKE-AAA-DA2-10-00-00AA-520A-A for

information on how to remove the stem.

Brake levers When you operate the brake lever, the brake pads move

against the wheel to decrease the speed. The brake lever on the left side operates the front brake. The brake lever on the

right side operates the rear brake.

Brakes When you operate the brakes, the brake pad moves against

the wheel to decrease the speed of the bicycle. Refer to \$1000DBIKE-AAA-DA1-00-00-00AA-041A-A for a description of

the braking system.

Shifters The shifters are the mechanisms that you use to change the

gears on the bicycle. There are 7 different types of shifters that have been developed over the years, but they all have the same functionality. When you operate the shifters, they pull the control cable to move the derailleur towards a larger diameter chain ring. The shifters can also loosen the cable to let the derailleur move towards a smaller diameter chain ring. Refer to \$1000DBIKE-AAA-DA5-30-00-00AA-041A-A for a functional

description of the shifters.

Crank The crank moves the power to the chain rings when the pedals

operate.

Pedals	The pedals move the force of movement from the feet to the

cranks.

Chain The chain moves the power from the chain rings to the

cogs on the freewheel. Refer to \$1000DBIKE-AAA-

DA4-10-00-00AA-251B-A for the procedure on how to clean the

chain.

Gears The gears have different mechanisms that function together to

change the speed of the bicycle. These mechanisms include:

the sprockets the chain the derailleur

Refer to S1000DBIKE-AAA-DA5-00-00-00AA-041A-A for a

functional description of the gear system.

Chain rings The chain rings (also known as the 'chain wheel') pull on the

chain when the cranks turn.

Derailleur Moves the chain from one sprocket to another to

change the gears. There are two different types of derailleur, the front and the rear. The highest ratio (highest gear) is when the chain is on the largest sprocket on the front and the smallest at the rear. To get the lowest gear, the smallest sprocket is at the front and the largest at the rear. Refer to \$1000DBIKE-AAA-DA5-10-00-00AA-041A-A for a functional description of the

derailleur system.

S1000D	BIKE-A	AA-DA5-30-00-00AA-041A-A	Shifters – Description of how it is made	

1 Introduction

Data about the bicycle and its control system is given in this document. This data will help you operate the bicycle.

2.1 Controls

Data about the controls that follow is given in this document:

- Para 2.2
- Para 2.3
- Para 2.4
- Para 2.5

2.2 Steering

The handlebars are used to steer the bike. They are at the front of the bicycle. You hold one of the handlebar grips with each hand and move the handle bar to change the direction of the bike.

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

2.3 **Shifters**

The gears control the ratio of pedal rotation to wheel rotation. You can change this with the shifters S1000DBIKE-AAA-DA5-30-00-00AA-041A-A . The shifters are on the handlebar.

A description of the two Table 2 follows.

Table 2 shifter correlation

Shifter Location	Affected Gears
Left	The buttons on the left shifter changes the gears on the front derailleur.
Right	The buttons on the right shifter changes the gears on the rear derailleur.

2.4 **Brakes**

You can decrease the speed of the bike with the brakes. You operate the brakes with the brake levers on the handlebar.

A description of the Table 3 follows.

Table 3 brake lever correlation

Brake Lever Location	Affected Brake
Left	This lever operates the front brake.
Right	This lever operates the rear brake.

2.5 **Pedals**

The ci-0004 are at the bottom of the seat tube. You operate the ci-0004 to move the bicycle forward.

Procedure

- 1 Examine the condition of the brakes.
- 1.1 Open the brake quick release.
- 1.2 Examine the condition and the thickness of the brake pads.
- 1.2.1 Make sure that there is a large quantity of rubber left.
- 1.2.2 Make sure that the pad is not too hard.
- 1.3 Clean all the unwanted material.

- 2 Do an inspection of the installation of the brakes.
- 2.1 Check the hydraulic brake system function.

ICN-S1000DBIKE-AAA-DA10000-0-U8025-00537-A-03-1

Fig 1, Other Hydraulic brake function

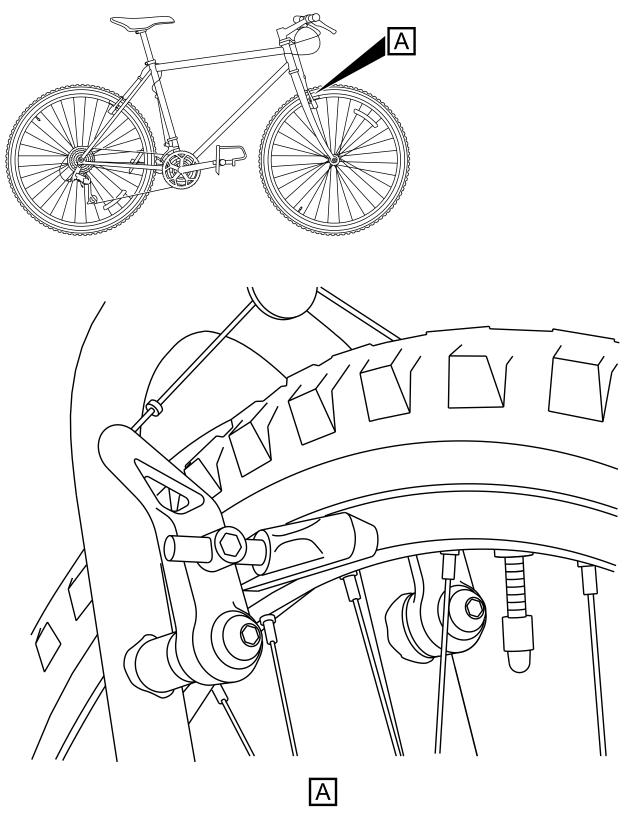

2.2 Make sure that there is sufficient clearance between the pad and the inner diameter of the brake surface.

2.3

CAUTION

If the position of the pads is too low on the rim, as shown in Fig 2, the pads can move. This could cause the separation of the spokes from their mountings., they could slip off causing the spokes to be torn out of their mountings.

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

ICN-S1000DBIKE-AAA-DA10000-0-U8025-00515-A-04-1

Fig 2 Brake pad seating

	Make sure that the pads are correctly installed in the center of the inner diameter of the brake surface.
3	Do a check of the tire pressure.
3.1	Do a check of the tire pressure with the Tire pressure gauge .
3.2	Compare the value you read with the recommended pressure that is shown into the sidewall of the tire.
3.3	Add the necessary air.
4	Examine the condition of the wheels.
4.1	Examine the rims for bulges and dents.
4.2	Examine for splits at the seam where an extruded rim is bonded.
5	Do a check of the headset bearings.
5.1	Straddle the bicycle.
	Apply the front brakes and push the handle bars forward.
5.2	Make sure that the headset bearings are tight.
6	Do the checks on the chain.
6.1	Visually examine the chain.
	If the chain is too dirty, clean it as specified in the clean chain task (refer to \$1000DBIKE-AAA-DA4-10-00-00AA-251B-A).
6.1.1	Visually examine the chain for links that are frozen or that do not move easily.
6.1.2	Apply the necessary General lubricant .
6.2	Do a check of the chain to make sure that it is tight.
6.2.1	Make sure that the play of the chain is not too much.
6.2.1.1	Move the chain on the largest chain ring.
6.2.1.2	Try to pull the chain away from the front of the chain ring.
	Make sure that the chain is not loose. Tighten the chain if, when you pull it away from the chain ring, you can see a full tooth.
6.2.2	Tighten the chain with the Allen wrench from the Specialist toolset.

WARNING

Do not get Detergent A into your eyes. If it gets into your eyes, wash them immediately in clean warm water.

WARNING

Do not get Detergent B into your eyes. If it gets into your eyes, wash them immediately in clean warm water.

CAUTION

Do not use a Water hose that has high pressure. A water hose that has high pressure can cause some parts to become loose or full of water.

CAUTION

Do not point the hose directly at the hub or at the bottom bracket bearings. This can cause damage to the parts.

CAUTION

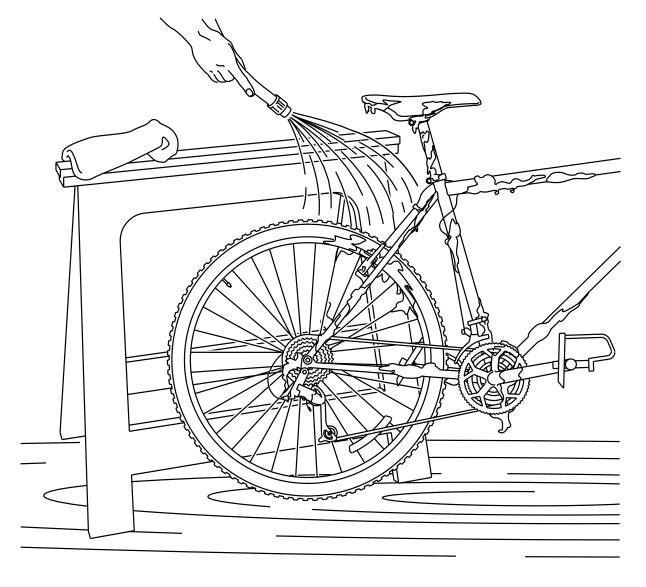

Apply Detergent B in accordance with the instruction on the container. The substance may cause damage to the Bike paint if it is not applied correctly.

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

S1000DBIKE-AAA-D00-00-00-00AA-258A-A

Procedure

1 Clean the bicycle with water to remove all dirt. Refer to Fig 1.

Procedure

- 1 Remove the rear wheel. (Refer to S1000DBIKE-AAA-DA0-20-00-00AA-520A-A)
- 2 Make sure that there is no air in the tube.
- 2.1 Loosen the cap on the valve stem.
- 2.2 Push the valve stem core down to bleed all the air.
- 3 Use a Tire lever to move the tire bead out of its seat. Lift the tire bead above the lip of the rim.

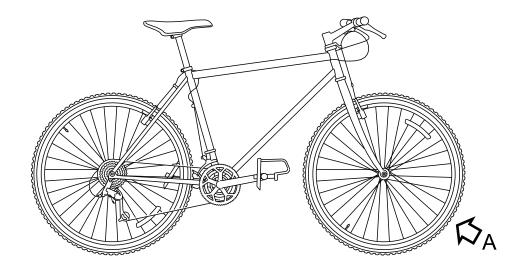

ICN-S1000DBIKE-AAA-DA00000-0-U8025-00506-A-04-1

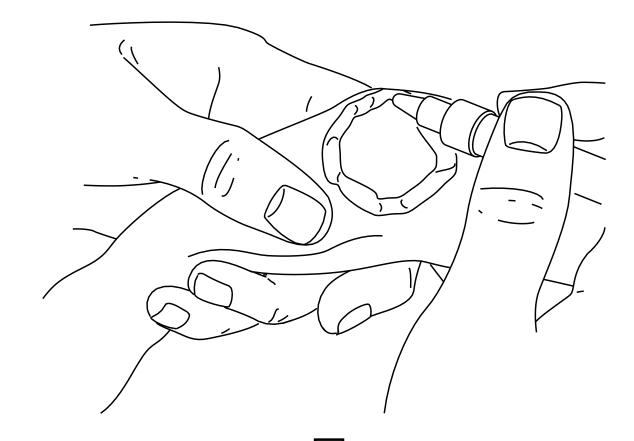

Fig 1 Unseating the tire with a tire lever

Remove the tube.

4

- 5 Inflate (not fully) the tube with the Foot pump. Examine the tube for leaks.
- 6 If you find a leak, identify it with a circle made with a Marker pen.

ICN-S1000DBIKE-AAA-DA01010-0-U8025-00508-A-04-1
Fig 2 Circle leak

- 7 Release most of the air.
- 8 Use a piece of sandpaper from the Tube patch kit and make the area on and around the hole rough. This will help the patch bond correctly.

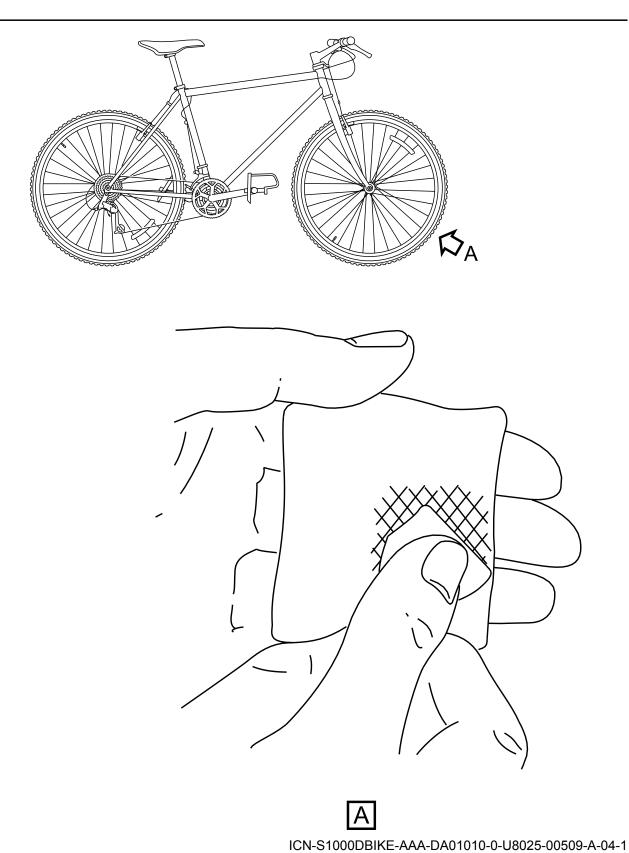

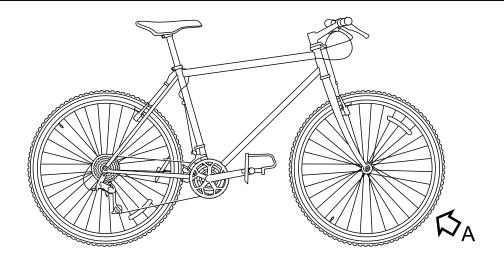

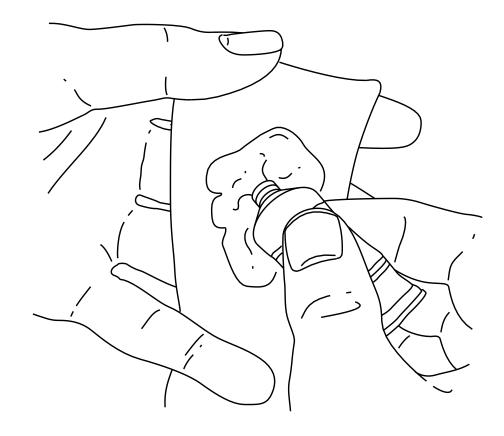

Fig 3 Sanding the application area

9

Apply a thin layer of glue from the patch kit on and around the hole. Make sure that the area with the glue is larger than the patch.

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

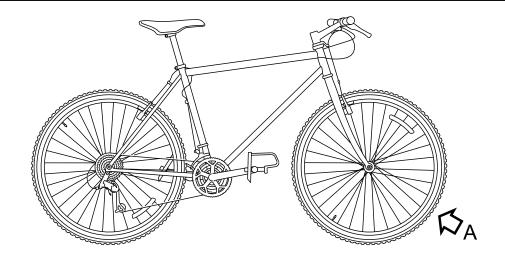

ICN-S1000DBIKE-AAA-DA01010-0-U8025-00510-A-04-1

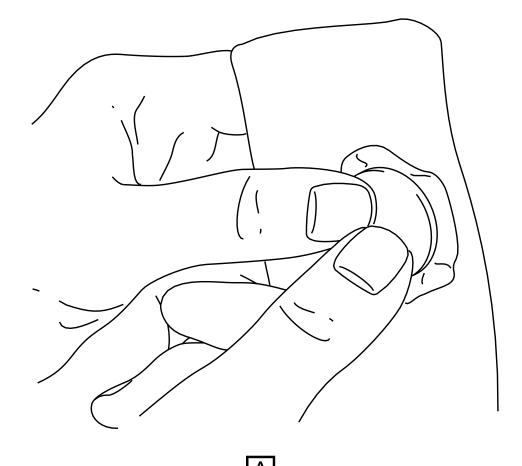

Fig 4 Apply glue to application area

Let the glue dry for five minutes until it becomes tacky and dim.

Remove the rear foil from the patch (that is a part of the patch kit) and push the patch in its position.

Push with your thumbs from the center of the patch to the outer part of the applied area.

ICN-S1000DBIKE-AAA-DA01010-0-U8025-00511-A-04-1

Fig 5 Apply pressure to tube

13	Remove the thin cover from the patch.
14	Put a very thin layer of talcum powder on and around the patch.
15	Inflate (not fully) the repaired tube with the foot pump.
16	Start at the valve stem and install the tube again between the tire and the rim.
17	Push the valve stem through the hole in the rim.
18	Make sure that the valve stem is straight.
19	Install the remaining of the tire.

Revision sequence

Original Issue date 2011-03-31

Summary

Reason

A lot of customers asked for the improvement of the front hanging in order to use the bike in more severe conditions.

Description

Replacement of the fork

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

Compliance

Compliance: Optional

Applicability

This Service Bulletin is applicable to bikes manufactured between 01/05/2001 and 30/09/2009

Applicable to: Mountain bicycle and Mountain storm Mk1

Configuration no. 1 covers mountain bicycle Mountain storm version Mk1

Applicable to: Mountain bicycle and Brook trekker Mk9

Configuration no. 2 covers mountain bicycle Brook trekker version Mk9

Planning information

Applicability

This Service Bulletin is applicable to bikes manufactured between 01/05/2001 and 30/09/2009

Applicable to: Mountain bicycle and Mountain storm Mk1

The S/N of the impacted bikes are: CAGE: U8025 [S/N: 1B070701]

Applicable to: Mountain bicycle and Brook trekker Mk9

The S/N of the impacted bikes are: CAGE: U8025 [S/N: 1B070643] CAGE: U8025 [S/N:

1B070644]

Applicable to: Mountain bicycle and Mountain storm Mk1

Configuration no. 1 covers mountain bicycle Mountain storm version Mk1

Applicable to: Mountain bicycle and Brook trekker Mk9

Configuration no. 2 covers mountain bicycle Brook trekker version Mk9

Concurrent Requirements

No info

Reason

- 1 Objective :
- 1.1 Improvement of the bike's front hanging.
- 2 Problem and effect:
- 2.1 A lot of customers would like to use the bike in more severe conditions.
- 3 Solution:
- 3.1 Replacement of the fork.

Description

- 1 Replacement of the original fork
- 1.1 by telescopic fork with a 140 mm clearance
- 1.2 by telescopic fork with a 100 mm clearance

Compliance

1 Compliance

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

Compliance: Optional

The modification should be made in accordance with the customer's availability, but within the following limits (before marked wear of the frame)

Table 8 Accomplishment time scale

Limit	Grace period
Basic limit Limit:	Grace period Limit:
Perform periodically	Perform periodically

Approval

This modification has been approved and certified in conformity with the requirements of the S1000D community.

Approval No. S1000D-020AA.

Procedure

1 PREPARATION

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

1.1 Remove the front wheel, refer to: S1000DBIKE-AAA-DA0-30-00-00AA-520A-A

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

1.2 Remove the front brakes, refer to: S1000DBIKE-AAA-DA1-20-00-00AA-520A-A

2 PROCEDURE

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)
2.1 Remove the fork, refer to: S1000DBIKE-AAA-D00-00-01-00AA-520A-A

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

2.2 Change the bike axis, refer to: S1000DBIKE-AAA-D00-00-01-00AA-93AA-A

Applicable to: Mountain bicycle and Mountain storm Mk1

2.3 Install the new fork, refer to: S1000DBIKE-AAA-D00-00-01-00AA-720A-A

Applicable to: Mountain bicycle and Brook trekker Mk9

2.3 Install the new fork, refer to: S1000DBIKE-AAA-D00-00-01-00AB-720A-A

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

2.4 Install the front brakes, refer to: S1000DBIKE-AAA-DA1-20-00-00AA-720A-A

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

2.5 Install the front wheel, refer to: \$1000DBIKE-AAA-DA0-30-00-00AA-720A-A

3 TEST

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

3.1 Test that the fork is properly installed, refer to: \$1000DBIKE-AAA-D00-00-01-00AA-341A-A

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

3.2 Front brakes test, refer to: BRAKE-AAA-DA1-00-00-00AA-341A-A

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

Description

1 The bicycle wheel

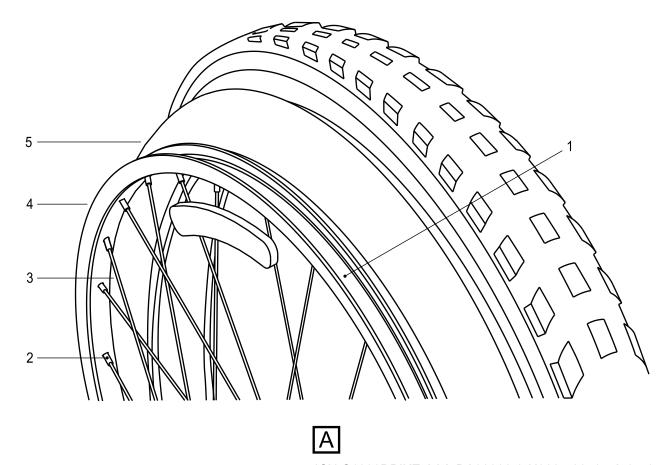

The wheel (refer to Fig 1) of a bicycle is a complex structure. The wheel assembly has these parts:

the tire the tube the spokes the spoke nipples the valve the hub

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

On their own, the individual components are not very strong. But, when they are installed together, the components make the complete wheel (refer to Fig 1). The complete wheel is resistant to almost any type of heavy loads and operation.

ICN-S1000DBIKE-AAA-DA00000-0-U8025-00504-A-04-1 Fig 1 Parts of the wheel

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

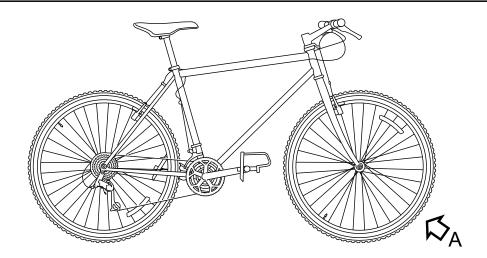

S1000DBIKE-AAA-DA0-00-00-00AA-041A-A

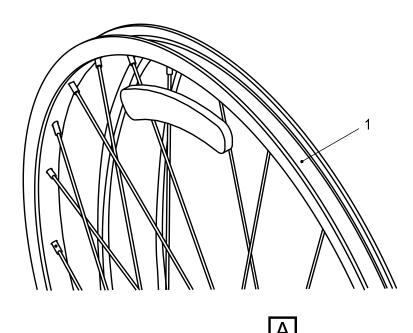

1.1 Spokes

The spokes go out from the hub and go across and below each other. The spoke nipples attach the spokes to the rim with the threads on the end of the spokes. You can use the spoke nipples to adjust the tension of the spokes. The tension on each of the spokes must be equal.

1.2 Wheel rim

The rim (refer to Fig 2) of the wheel has a lining of rim tape. This tape protects the tube from damage that the rough edges on the spoke nipples can cause.

ICN-S1000DBIKE-AAA-DA00000-0-U8025-00504-B-04-1

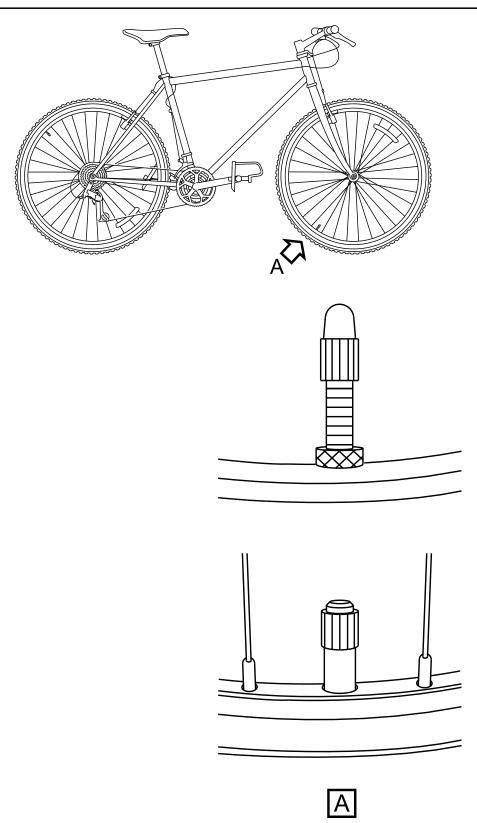

Fig 2 The tire and rim

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

S1000DBIKE-AAA-DA0-00-00-00AA-041A-A

1.3 Tube and tire

The tube and the tire install on the rim. The sidewalls of the tire have markings on them. These which are used to indicate the correct direction of rotation. The markings also make sure the tire installs on the rim and that the directional arrows points in the correct direction. You install the tube into the tire before you inflate it. The tube has a valve (refer to Fig 3) which you put through the hole in the rim. This valve (refer to Fig 3) is used to inflate the tube and the tire to the correct pressure. A dust cap installs on the valve (refer to Fig 3) to prevent damage that dust and debris can cause.

ICN-S1000DBIKE-AAA-DA00000-0-U8025-00505-A-04-1 Fig 3 Valve

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

Procedure

- 1 Locate the valve stem of tire.
- 2 Use the tire pressure gauge (Tire pressure gauge) to check the tire pressure.
- Tire pressure should between 2000 hPa to 2700 hPa.
- 3.1 If tire pressure is less than 2000 hPa inflate tire. Refer to \$1000DBIKE-AAA-DA0-10-20-00AA-215A-A
- 3.2 If the tire cannot maintain pressure or the tire pressure is greater than 2700 hPa replace the inner tube. Refer to \$1000DBIKE-AAA-DA0-10-10-00AA-921A-A

Isolation procedure

Use the tire pressure gauge (Tire pressure gauge) to do a check of the pressure What is the tire pressure reading?
More than 2700 hPa Step 2
Between 100 hPa and 2700 hPa Step 3
Less than 100 hPa Step 4

2	Deflate the tire until the pressure is 2700 hPa
	Go to requirements after job completion
3	Inflate the tire as given in S1000DBIKE-AAA-DA0-10-20-00AA-215A-A
	Go to requirements after job completion
4	To do a check of the tire for damage
	Is there damage to the tire?
4.1	Yes: Go to Step 5
4.2	No: Go to Step 6
5	Replace the tire (refer to S1000DBIKE-AAA-DA0-10-20-00AA-921A-A)
	Go to requirements after job completion
6	Replace the inner-tube (refer to S1000DBIKE-AAA-DA0-10-10-00AA-921A-A)
	Go to requirements after job completion

Procedure

- 1 Lift and turn the bicycle and make sure the bicycle is held safely in this position.
- 2 Use a standard wrench from the Specialist toolset and loosen the brake caliper.
- 3 Remove the axle bolt.
- 4 Remove the wheel.
- 5 Deflate the tire.

6	Use the Tire lever from the Specialist toolset and remove the old tire from the wheel.
7	Use the Tire lever from the Specialist toolset and attach the new Tire to the wheel. Refer to S1000DBIKE-AAA-DA0-00-00-00AA-041A-A
8	Inflate the tire (refer to \$1000DBIKE-AAA-DA0-10-20-00AA-215A-A).
9	Install the wheel.
10	Tighten the axle bolt.
11	Tighten the brake caliper.

Description

1 Brake system

The most important part of the bicycle is the brake system. Only a minimum maintenance of the brake system is necessary. But, when a problem does occur, make sure you to do the necessary maintenance as quickly as possible. If you do not do this the bicycle will be dangerous to use.

There are nine different types of brake systems. The one found on most bicycles is the cantilever brake (refer to Para 1.1).

1.1 Cantilever brake

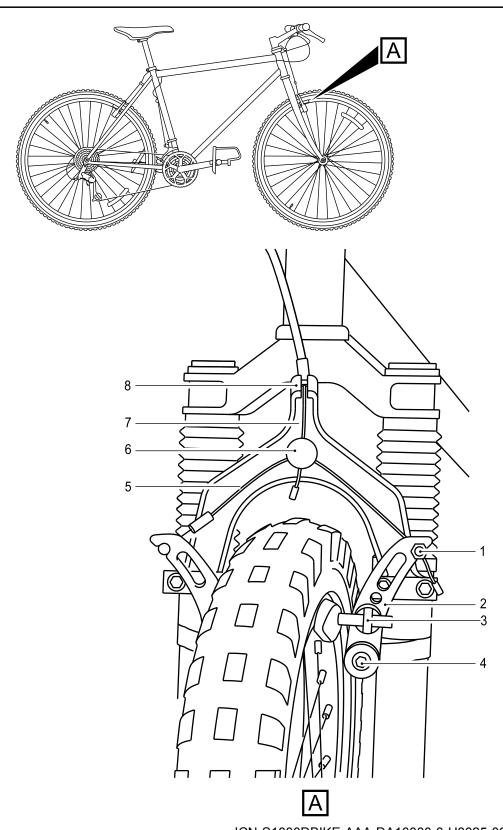

The brake system (refer to Fig 1) has these primary components:

the brake lever (refer to Para 1.3) the brake cable

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

S1000DBIKE-AAA-DA1-00-00-00AA-041A-A

the brake arm the brake clamp (also known as callipers) the brake pads (refer to Para 1.2)

ICN-S1000DBIKE-AAA-DA10000-0-U8025-00512-A-04-1

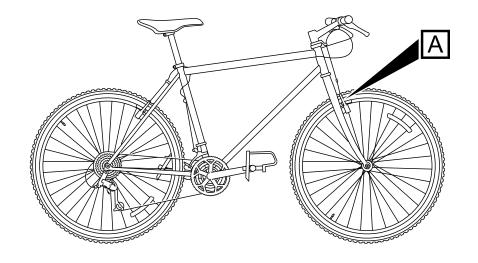

Fig 1 Cantilever brake with straddle cable

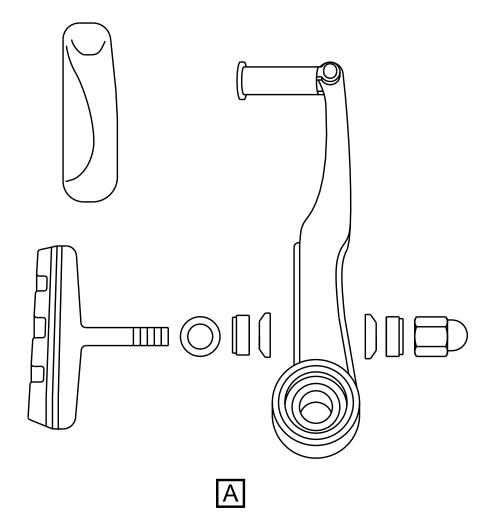

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

A cable that goes from the brake levers on the handlebars pulls the two levers on the brakes together. This presses the brake pads against the outer rim of the wheel, which decreases the speed of the bicycle.

1.2 Brake pads

There are four brake pads (refer to Fig 2) on the bicycle. Two are found on the front wheel and two on the rear wheel. The brake pads are made out of hard wearing rubber. The pads press against the rim of the wheel to cause friction when the you operate the brake levers.

ICN-S1000DBIKE-AAA-DA10000-0-U8025-00513-A-04-1

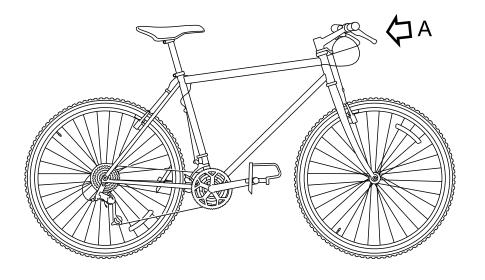

Fig 2 Exploded diagram of a brake

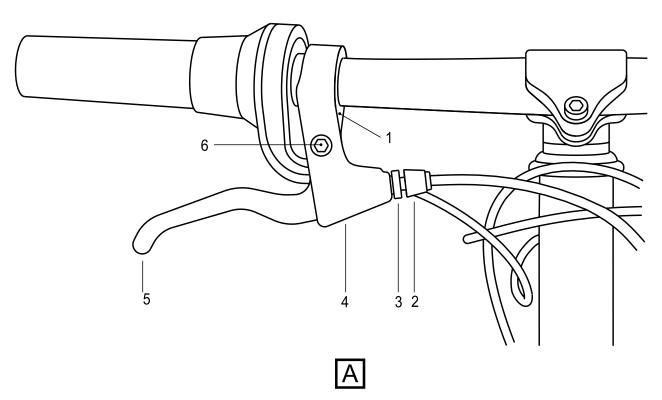

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

S1000DBIKE-AAA-DA1-00-00-00AA-041A-A

1.3 Brake lever

The brake levers (refer to Fig 3) are easily damaged. The lever is installed in the mount. A clamp bolt holds the mount. This bolt is not visible because it is found in the mount. The lever turns on a lever pivot bolt. The adjuster lock nut holds the brake cable. This lock nut adjusts the tension of the cable.

ICN-S1000DBIKE-AAA-DA10000-0-U8025-00514-A-04-1

Description

1 Steering

The steering on the bike is what enables the bike to manoeuvre in a given direction during travel. The steering system on the bike is made of three parts, they are:

Para 1.1 The handlebar Para 1.2 The headset Para 1.3 The stem

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

1.1 Handlebar

This consists of a horizontal bar attached to the stem with handgrips at the end. Brake levers and shifters are also attached to this bar although they do not have any part in the steering mechanism. The handlebars manoeuvrability is a sideways swivelling action. The handlebars themselves do not provide this swivelling, the headset (also known as the steering tube) is the mechanism that enables the handlebars to swivel.

1.2 Headset

This mechanism is situated in front of the frame and connects the front fork to the stem and handlebars. The headset allows the handlebars to swivel left and right for steering purposes.

For a full description of the headset, refer to S1000DBIKE-AAA-DA2-30-00-00AA-041A-A.

1.3 Stem

The stem is a piece that attaches the handlebar to the steering tube. Basically the stem is just a threaded stem bolt situated inside the steerer tube and is what attaches the handlebars to the headset.

Steering

Safety conditions

Procedure

1 Remove the grips

- 1.1 Put a long thin screwdriver below the grip and apply water between the grip and the handle bar.
- 1.2 Turn the grip forwards and rearwards to loosen it and then pull it off the end of the handlebar.
- 2 Remove the brake and the shift levers from the handlebars
- 2.1 Loosen the clamp screw (refer to Fig 1) which is behind or below the brake lever (as shown).

ICN-S1000DBIKE-AAA-DA22000-0-U8025-00518-A-04-1

Fig 1 Loosen the clamp screw with the Allen wrench

- 2.2 Remove the lever and the mount from the handlebar.
- 2.3 Loosen the clamp bolt and remove the shifter from the handlebar.

3 Remove the handlebar

Use a Set of Allen wrenches and loosen the clamp bolt (refer to Fig 2). To remove, move the handlebar out of the stem.

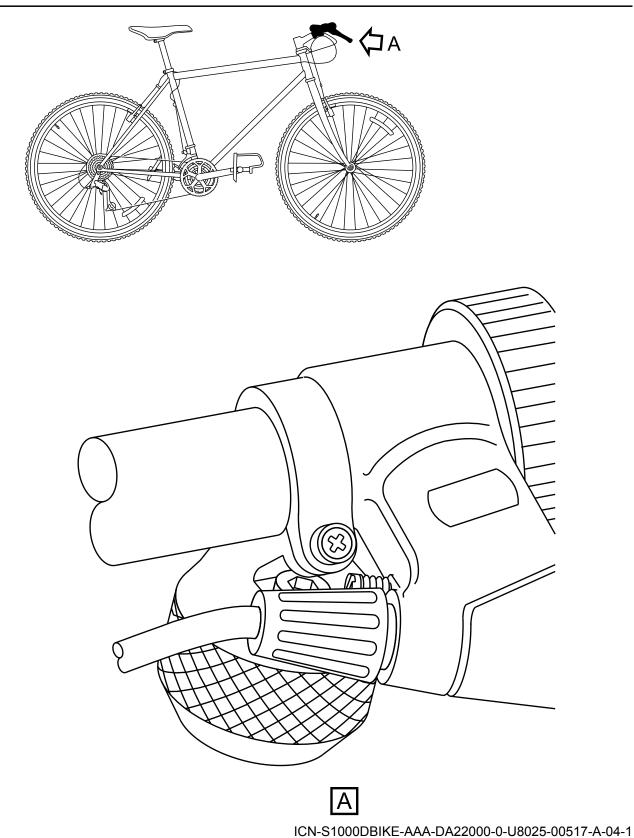

Fig 2 Loosen the clamp bolt

Safety conditions

WARNING

Do not ride the bicycle until the grips have become dry and are firmly held in position. If the grips are wet, your hands can move off the grips when you ride the bicycle.

WARNING Do not ride a bicycle with no grips on the handlebar. CAUTION

Procedure

Make sure the handlebar is correctly aligned in the center of the stem.

- Put the Handlebar in the stem and tighten the clamp bolt with a Set of Allen wrenches. Make sure the handlebar is correctly aligned in the center of the stem. Tighten the clamp bolt.
- 2 Put the Brake lever and Shifter lever on the handlebar.
- 2.1 Move the Shifter lever on the Handlebar again and make sure you do not catch the cables.
- 2.2 Tighten the clamp bolt.
- 2.3 Move the Brake lever mount and the brake lever on the Handlebar again.
- 2.4 Tighten the clamp screw.
- 3 Replace the Handlebar grips.
- 3.1 Apply with the Extra firm hold hairspray to the Handlebar grips area of the Brake lever mount.
- 3.2 Before the Extra firm hold hairspray becomes dry, move the Handlebar grips into the correct position. Make sure the grip protects the end of the Handlebar or install a Handlebar plug.

Description

1 Headset

The headset (refer to Fig 1) is a pair of bearings on the two ends of the head tube of the frame. These bearings permit the fork to turn rearward and forward (for example, to let the rider turn the handlebars for the steering).

The headset (refer to Fig 1) includes the parts that follow:

The bearing races that push into the head tube a bearing race that pushes on the fork steerer tube an adjustable upper race two sets of ball bearings

A headset has cups that are pushed into the head tube and a ring on the fork. All three must be fully parallel. It is usually necessary to remove rough paint to get all three fully parallel.

The upper race installs onto the steerer tube with a thread. A locknut is used to safety the upper race.

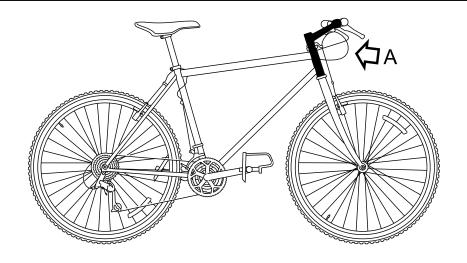

A clamp bolt holds the stem to the steerer tube.

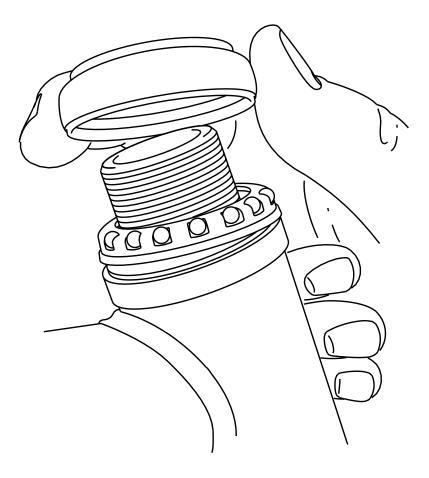

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

S1000DBIKE-AAA-DA2-30-00-00AA-041A-A

The fourth remaining bearing race is part of a nut that installs on the threaded top end of the fork. This is done after you install it in the head tube. It is sometimes necessary for some headsets to have more thread at the top of the head tube. If the fork is too long, the spacer rings can be installed. If it is too short, there is a limit to the number of headsets you can use.

For an illustration of the parts of the headset (refer to Fig 1).

Description

1 The bicycle frame

The frame is the skeleton, the primary part of your bicycle. Its structure makes the bicycle resistant to large forces.

The initial frames (refer to Fig 1) were tubes of aluminum or steel welded together.

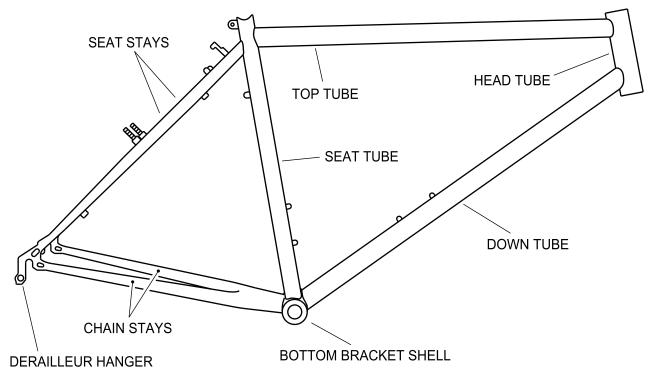

ICN-S1000DBIKE-AAA-DA30000-0-U8025-00534-A-04-1

Fig 1 Welded frame joints

Subsequent frames (refer to Fig 2) can be made out of a wide variety of materials, including aluminium, titanium, or chrome moly.

ICN-S1000DBIKE-AAA-DA30000-0-U8025-00503-A-04-1 Fig 2 Frame

are different and can also be of different materials (for example, titanium or chrome moly). Some bicycle frames are of carbon fiber. To get this material, it is necessary to put sheets of carbon fiber cloth on foam forms and epoxy them in position. This procedure gives a very light, strong structure that can have different shapes.

The frame includes the parts that follow:

- the top tube (the higher bar of the bicycle frame)
- the down tube (the section of the frame that extends from the stem to the bottom bracket)
- the head tube (the part of the frame that the fork steerer tube goes through)
- the seat tube (the vertical part of the frame that is the rear of the front triangle and that is between the bottom bracket and the top tube)
- the seat stay (the tube that includes the distance between the seat tube and the rear dropouts)
- the chain stay (the tube that is the bottom part of the rear triangle)

Description

1 Drive train

The drive train is the group of components that are necessary for the operation of the bicycle. The drive train is the primary system for the movement of the bicycle. A typical drive train has the chain wheels, the chain, the pedals and the saddle.

Since the drive train has many components, it is necessary to do a regular maintenance. The drive train maintenance is easy and the users can disassemble and assemble each part of the drive train. Because of this, when one part is defective, it is possible to remove and replace it with a new one.

WARNING

Dry Lube is a very dangerous substance. Do not get it onto your skin. Use it in a well ventilated area. If you swallow it seek immediate medical advice. If it gets into your eyes wash your eyes in clean water and seek medical advice.

WARNING

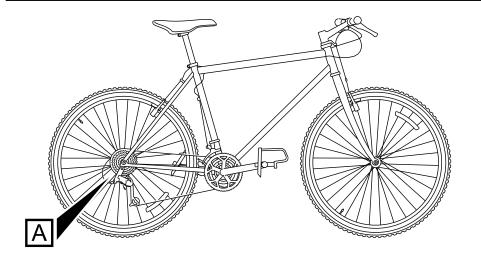

Wet Lube is a very dangerous substance. Do not get it onto your skin. Use it in a well ventilated area. If you swallow it seek immediate medical advice. If it gets into your eyes wash your eyes in clean water and seek medical advice.

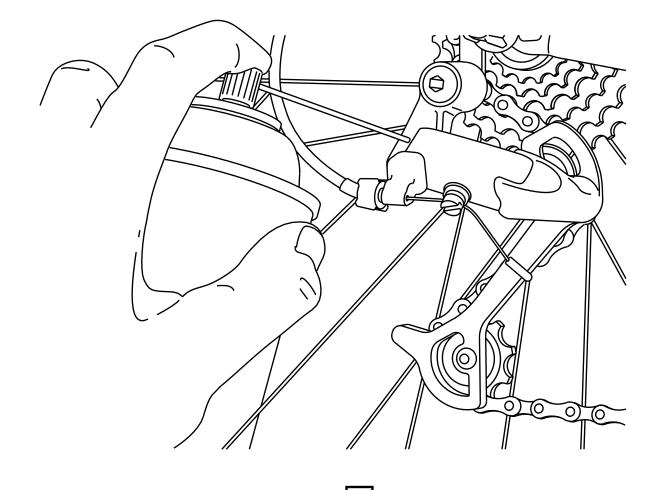

Procedure

- Apply the penetrating lubricant into all the parts of the bike that move. This includes:
 - derailleur pivots (refer to Fig 1)
 - derailleur tension (refer to Fig 2)
 - brake lever pivots (refer to Fig 3)

These brake lever pivots include:

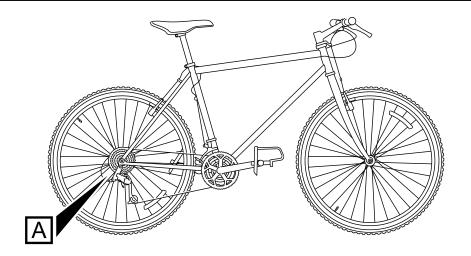

- derailleur pivots
- derailleur tension
- guide wheels
- brake lever pivots
- control cables and where they go into their casings

2	Lubricate the chain.
2.1	Make sure the chain is clean and dry.
2.2	Put the Floor covering on the floor below the chain.
2.3	Use a Dry lube for dry conditions.
2.4	Use a Wet lube for wet conditions
2.5	Apply the lubricant to each roller of the chain (refer to Fig 4) but only apply a small quantity.

ICN-S1000DBIKE-AAA-DA41000-0-U8025-00528-A-04-1 Fig 4 Lubricate the chain

2.6 Hold the nozzle of the container above the front of the chain ring and slowly turn the cranks rearwards.

2.7

CAUTION

Do not get lubrication oil into the brake system. Oil in the break system can affect the efficiency of the bake system. Do not get oil onto the floor where it can easily get transferred onto the brake system.

Let the lubricant soak into chain before you clean the unwanted lubricant from the chain.

- 3 Do a check of the rear wheel rim and clean the unwanted lubricant if necessary.
- Do a check of the chain to make sure that each link is lubricated. If there are links that do not move easily or have become frozen, lubricate the chain again (refer to Step 2).
- Do a check of the remaining lubricated parts and clean the unwanted lubricant with a Clean dry cloth.

Procedure

- 1 Inspect the chain.
 - Do the inspection of the chain as given in the pre-ride checks (refer to \$1000DBIKE-AAA-D00-00-00AA-121A-A).
- 2 Prepare the cleaning area.
- 2.1 Put the Floor covering on a satisfactory floor area.
- 2.2 Put the bicycle on the floor covering.
- 3 Clean debris from the chain.
- 3.1 Use the Stiff bristle brush and loosen as much unwanted material as possible.
- 3.2 Make sure that you remove all the unwanted material from the chain.
- 4 Clean the chain.
- 4.1 Open the Chain cleaning tool and fill with the Chain cleaning fluid.
- 4.2 Move the chain to the middle chainring and the middle sprocket at the rear.
- 4.3 Put the chain in the chain guides of the chain cleaning tool and lock the tool on the chain.

4.4	Hold the tool with the left hand and slowly turn the rearwards with the right hand.
4.5	Press the button on the cleaning tool to make sure that cleaning fluid flows until the tool is empty.
4.6	If necessary, remove the unwanted chain cleaning fluid.
5	Lubricate the chain.
5.1	Use the General lubricant and lubricate the chain.
5.2	Unlock and remove the cleaning tool.
5.3	If necessary, remove the unwanted lubricant.

S1000DBIKE-AAA-DA5-30-00-00AA-041A-A	Shifters – Description of how it is made

Description

1 Gears

The gears include the mechanism, the hubs and the shifters.

The description of the mechanisms is given in \$1000DBIKE-AAA-DA5-10-00-00AA-041A-A

The description of the shifters is given in S1000DBIKE-AAA-DA5-30-00-00AA-041A-A

The bicycles of these days can have 27 gears or more. The mountain bikes use a set that includes:

- Three socket sprockets of different dimension on the front
- Nine socket sprockets of different dimensions at the rear

This set gives the gear ratios.

The shifters installed on the handlebars change the gears and operate the mechanisms (also known as derailleurs). These derailleurs are cable-actuated mechanisms. They move the chain from the different sprockets.

The hub is the center of the wheel and contains the axle and bearings.

The gears let the rider crank at the pedals at a constant movement on slopes of different angles.

There are two different types of derailleur, the front and the rear.

1.1 Front derailleur

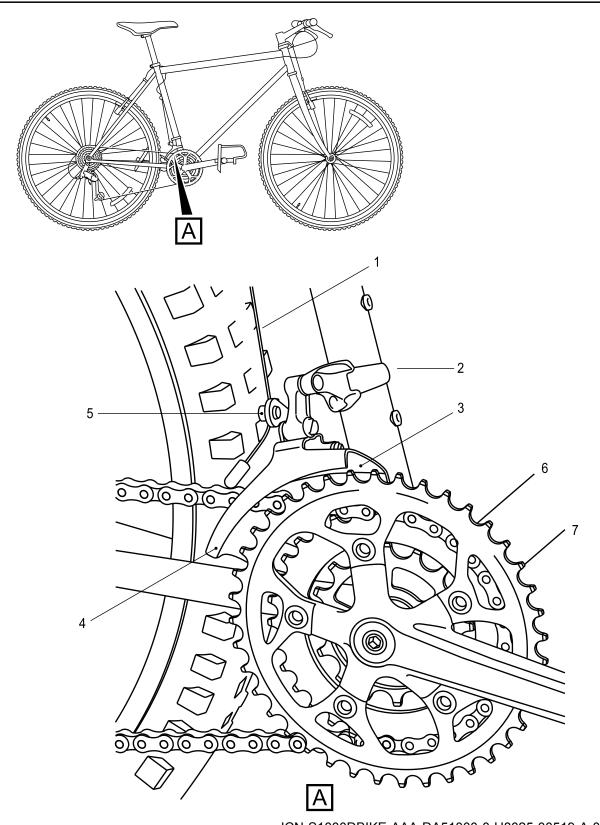

The front derailleur (refer to Fig 1) contains two types of screws to keep the movement of the derailleur to a minimum. These screws are:

the stop screw low-gear the stop screw high-gear

The function of these screws is to prevent the rider from over shifting . If this occurs, the chain will go out of the chain wheel.

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

S1000DBIKE-AAA-DA5-10-00-00AA-041A-A

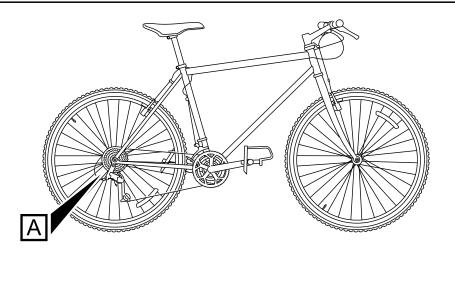

ICN-S1000DBIKE-AAA-DA51000-0-U8025-00519-A-04-1 Fig 1 Front derailleur

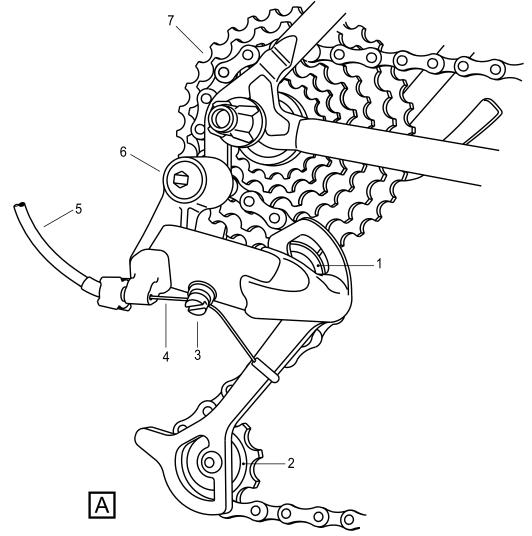

The derailleur is installed on the bicycle seat tube with a clamp and is parallel to the three front sprockets.

The shift cable is connected between the shifters on the handle bars and the cable clamp bolt on the front derailleur. This operates the derailleur. On the sprockets there is an inner and outer cage. The clamp attaches the cage.

1.2 Rear derailleur

The rear derailleur (refer to Fig 2) section contains the sprockets for the different gear changes. When the cable clamp bolt is tight, it holds the shift cable in its position. A screwed bolt holds the tension wheel.

ICN-S1000DBIKE-AAA-DA51000-0-U8025-00520-A-04-1

Fig 2 Rear derailleur

The derailleur mounting bolt connects the derailleur to the frame. When the user attaches this bolt, this makes sure that the cage plates are parallel with the chain rings.

The guide wheel has the function to move the chain with the derailleur. It moves the chain from one sprocket to the other. The guide wheel must not move on its axis. If this occurs, there will be wear on the wheel. The position of the guide wheel is below the largest sprocket.

Procedure

- 1 Remove the axle.
- 1.1 Use the cone-wrench from the Specialist toolset and remove the locknut from one side of the axle.
- 1.2 Remove the washer and the cone from the axle.

CAUTION

Make sure you do not lose the bearings from the hub. Be prepared to catch the bearings if they fall out. Missing bearings can cause damage to the hub.

Pull the axle out from the other side as shown in Fig 1 .

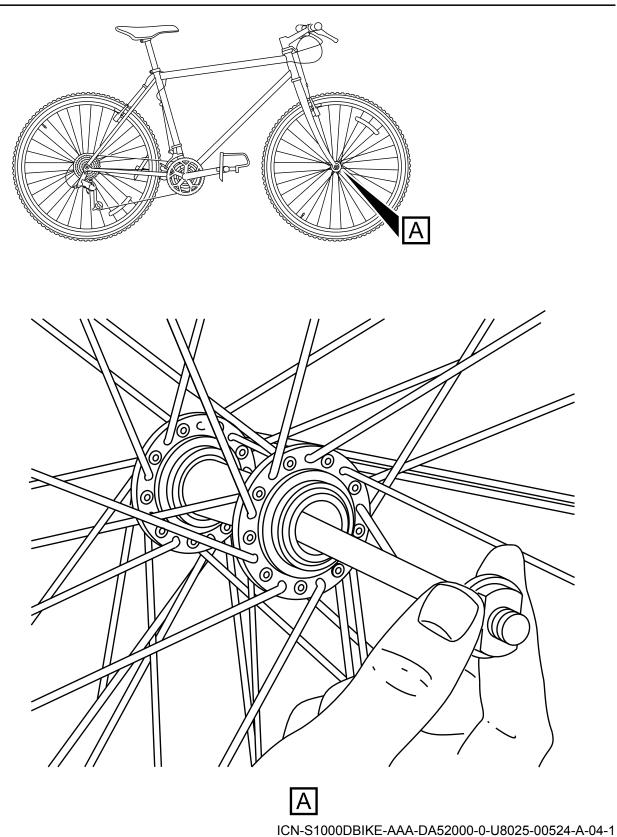

Fig 1 Removing the axle

2	Remove the bearings.
2.1	Use a small screwdriver from the Specialist toolset and remove the bearings from their races.
2.2	Make sure that each side of the hub has the same number of bearings.
2.3	Use the Degreasing agent and clean all the parts of the hub.
2.4	Do a check of the axle to make sure that it is straight.
2.5	Examine the bearing contact area on the cones and the races in the hub for pitting and other signs of damage.
2.6	Do a check of the ball bearings for signs of damage.
2.7	Apply a large quantity of General grease on each hub race.
3	Assemble the hub.
3.1	Install the ball bearings into the races and push them into the grease.
3.2	Apply more grease on the tops of the bearings.
3.3	Install the axle through the hub.
3.4	Install the cone, the washer and the locknut on the other side of the axle.
3.5	Use the cone-wrench from the specialist toolset and carefully tighten the locknut.

Description

1 Shifters

The thumb shifter is a usual type in modern bicycles. It is possible to adjust this type of shifter for operation in the index position or in the friction position. The differences between the two are:

- The index shifters change the gears with a click of a lever.
- The friction shifters hold the derailleur in its position by friction.

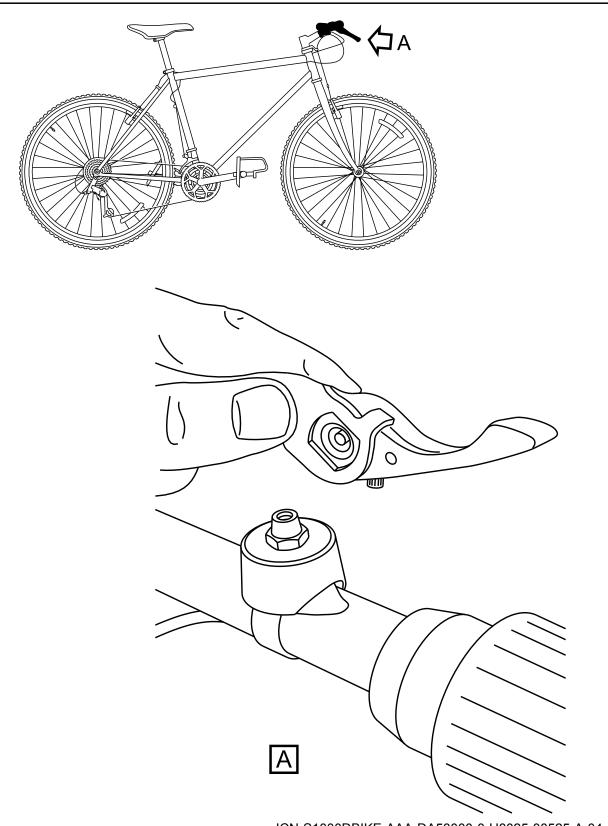

The thumb shifters (refer to Fig 1) are held on the bicycle with a screw. The paragraph that follows gives a description of a thumb shifter.

ICN-S1000DBIKE-AAA-DA53000-0-U8025-00535-A-04-1 Fig 1 Thumb shifter index type

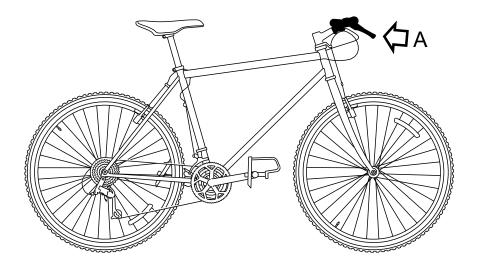

2 How a thumb shifter is made up

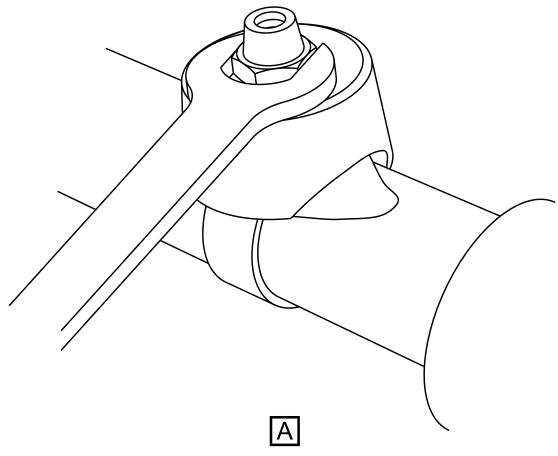

A wing nut (refer to Fig 2) from the top of the lever holds the thumb shifter. The lever is on top of the mount and the mount is on the handle bar with a nut. To remove the mount, it is necessary to loosen the nut of two turns (refer to Fig 3), then the mount can move from the handle bar from the top of the lever. The lever sits on top of the mount and the mount is fixed into pace on the handle bar by a nut.

Description

1 Brake system

The most important part of the bicycle is the brake system. Only a minimum maintenance of the brake system is necessary. But, when a problem does occur, make sure you to do the necessary maintenance as quickly as possible. If you do not do this the bicycle will be dangerous to use.

There are nine different types of brake systems. The one found on most bicycles is the cantilever brake (refer to Para 1.1).

1.1 Cantilever brake

The brake system (refer to Fig 1) has these primary components:

the brake lever (refer to Para 1.3) the brake cable

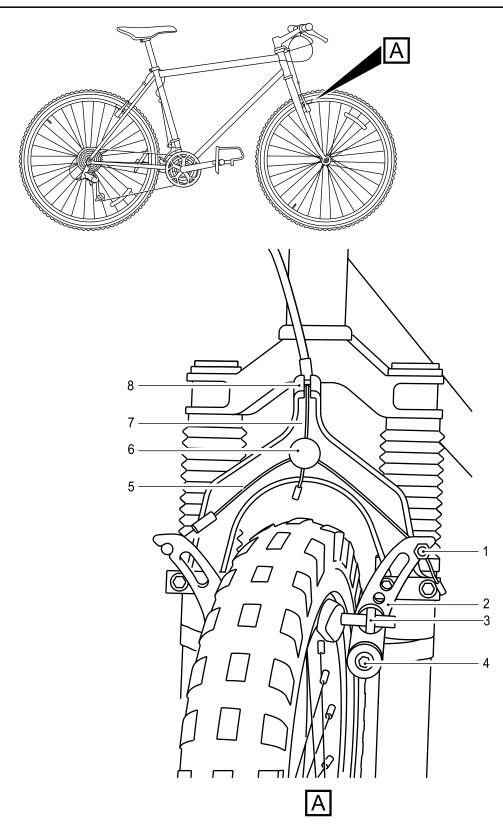

Applicable to: serialNo: 0001~0008 and model: BR01

BRAKE-AAA-DA1-00-00-00AA-041A-A

the brake arm the brake clamp (also known as callipers) the brake pads (refer to Para 1.2)

BRAKE-AAA-DA1-00-00-00AA-041A-A

Applicable to: serialNo: 0001~0008 and model: BR01

ICN-S1000DBIKE-AAA-DA10000-0-U8025-00512-A-04-1

Fig 1 Cantilever brake with straddle cable

Applicable to: serialNo: 0001~0008 and model: BR01

BRAKE-AAA-DA1-00-00-00AA-041A-A

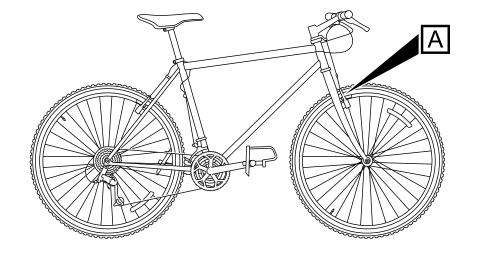

A cable that goes from the brake levers on the handlebars pulls the two levers on the brakes together. This presses the brake pads against the outer rim of the wheel, which decreases the speed of the bicycle.

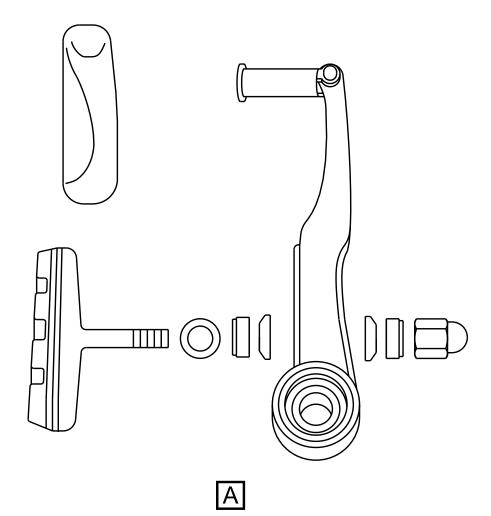

1.2 Brake pads

There are four brake pads (refer to Fig 2) on the bicycle. Two are found on the front wheel and two on the rear wheel. The brake pads are made out of hard wearing rubber. The pads press against the rim of the wheel to cause friction when the you operate the brake levers.

BRAKE-AAA-DA1-00-00-00AA-041A-A

Applicable to: serialNo: 0001~0008 and model: BR01

ICN-S1000DBIKE-AAA-DA10000-0-U8025-00513-A-04-1

Fig 2 Exploded diagram of a brake

Applicable to: serialNo: 0001~0008 and model: BR01

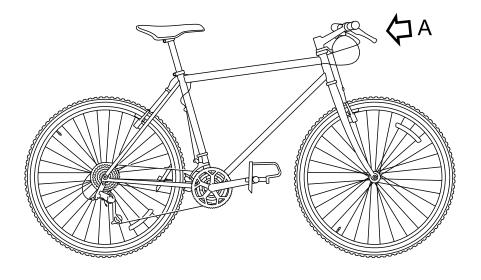

BRAKE-AAA-DA1-00-00-00AA-041A-A

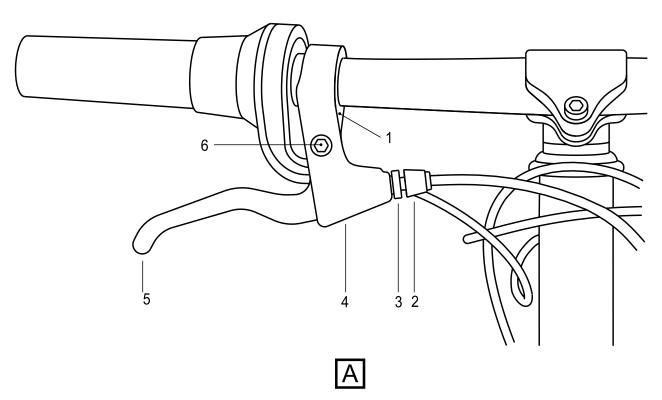

1.3 Brake lever

The brake levers (refer to Fig 3) are easily damaged. The lever is installed in the mount. A clamp bolt holds the mount. This bolt is not visible because it is found in the mount. The lever turns on a lever pivot bolt. The adjuster lock nut holds the brake cable. This lock nut adjusts the tension of the cable.

Procedure

- Do a visual inspection of the brakes as given in the pre-ride checks (refer to \$1000DBIKE-AAA-D00-00-00AA-121A-A).
- 2 Clean the brake pads.
- 2.1 Find each of the brake pads.
- 2.2 Apply a thin layer of the Rubbing alcohol on each of the brake pads.
- 2.3 Rub the surface until you have applied the Rubbing alcohol to the complete surface of the pad.
- 2.4 Remove the unwanted alcohol.

1 BSK-TLST-001

Tool number:	BSK-TLST-001
Manufacturer code:	.KZ666
Description for part:	Specialist toolset Descr
Short name:	Specialist toolset
Procurement data Technical data Quantity:	.1
Alternatives: - Tool	
Description:	. Specialist toolset Descr

2	BSK-TLST-001-01						
	Tool number:	.BSK-TLST-001-01					
	Manufacturer code:	.KZ666					
	Description for part:	. Tire pressure gauge Descr					
	Short name:	. Tire pressure gauge					
	Procurement data						
	Technical data Quantity:	1					
	Alternatives: - Tool						
	Description:	. Tire pressure gauge Descr					
3	BSK-TLST-001-02						
	Tool number:	. BSK-TLST-001-02					
	Manufacturer code:	.KZ666					
	Description for part:	. Stiff bristle brus Descr					
	Short name:	. Stiff bristle brush					
	Procurement data						
	Technical data Quantity:	1					
	Alternatives:						
	- Tool						
	Description:	. Stiff bristle brush Descr					
4	BSK-TLST-001-03						
	Tool number:	.BSK-TLST-001-03					
	Manufacturer code:	.KZ666					
	Description for part:	. Chain cleaning tool Descr					
	Short name:	. Chain cleaning tool					
	Procurement data Technical data Quantity:	1					
	Alternatives:	I					
	- Tool						
	Description:	. Chain cleaning tool Descr					

5	BSK-TLST-001-04	
	Tool number:	BSK-TLST-001-04
	Manufacturer code:	KZ666
	Description for part:	Tire lever Descr
	Short name:	Tire lever
	Procurement data Technical data Quantity:	1
	Alternatives: - Tool	
	Description:	Tire lever Descr
6	BSK-TLST-001-05	
	Tool number:	BSK-TLST-001-05
	Manufacturer code:	KZ666
	Description for part:	Foot pump Descr
	Short name:	Foot pump
	Procurement data Technical data Quantity:	1
	Alternatives: - Tool	1
	Description:	Foot pump Descr
7	BSK-TLST-001-07	
	Tool number:	BSK-TLST-001-07
	Manufacturer code:	KZ666
	Description for part:	Marker pen Descr
	Short name:	Marker pen
	Procurement data Technical data Quantity:	1
	Alternatives: - Tool	1

Description:......Marker pen Descr

8	BSK-TLST-001-07							
	Tool number:	BSK-TLST-001-07						
	Manufacturer code:	KZ666						
	Description for part:	Tube patch kit Descr						
	Short name:	Tube patch kit						
	Procurement data							
	Technical data Quantity:	4						
	Alternatives:	I						
	- Tool							
	Description:	Tube patch kit Descr						
9	BSK-TLST-001-08							
	Tool number:	BSK-TLST-001-08						
	Manufacturer code:							
	Description for part:	8mm Allen wrench Desc						
	Short name:							
	Procurement data							
	Technical data	4						
	Quantity:	1						
	Alternatives: - Tool							
		8mm Allen wrench Desc						
10	BSK-TLST-001-09							
	Tool number:	BSK-TLST-001-09						
	Manufacturer code:	KZ666						
	Description for part:	Water hose Descr						
	Short name:	Water hose						
	Procurement data							
	Technical data Quantity:	1						
	Alternatives:							
	– Tool							
	Description:	Water hose Descr						

11	BSK-TLST-001-11	
	Tool number:	BSK-TLST-001-11
	Manufacturer code:	KZ666
	Description for part:	Sponge Descr
	Short name:	Sponge
	Procurement data Technical data Quantity:	1
	Alternatives: - Tool	
	Description:	Sponge Descr
12	BSK-TLST-001-12	
	Tool number:	BSK-TLST-001-12
	Manufacturer code:	KZ666
	Description for part:	Clean dry cloth Descr
	Short name:	Clean dry cloth
	Procurement data Technical data Quantity:	1
	Alternatives: - Tool	
	Description:	Clean dry cloth Descr
13	BSK-TLST-001-13	
	Tool number:	BSK-TLST-001-13
	Manufacturer code:	KZ666
	Description for part:	Set of Allen wrenches Descr
	Short name:	Set of Allen wrenches
	Procurement data Technical data Quantity:	1
	Alternatives: - Tool	I

Description: Set of Allen wrenches Descr

14 **BSK-TLST-999-01** Tool number: BSK-TLST-999-01 Manufacturer code:.....KZ666 Description for part:...... Test stand Descr Short name: Test stand **Procurement data** Technical data Quantity:.....1 Alternatives: Tool Description: Test stand Descr 15 **HSP-D001** Tool number: HSP-D001 Manufacturer code:.....HS111 Description for part:..... Extra firm hold hairspray Descr Short name: Extra firm hold hairspray Procurement data Technical data Quantity:.....1 Alternatives: Tool Description: Extra firm hold hairspray Descr LL-003 16 Tool number: LL-003 Manufacturer code: KZ222 Short name: Chain cleaning fluid Procurement data Technical data Quantity:.....As required Alternatives: Tool

17	PPP-001
	Tool number:PPP-001
	Manufacturer code:KK999
	Description for part: Floor covering Descr
	Short name:Floor covering
	Procurement data Technical data Quantity:1
	Alternatives: - Tool
	Description: Floor covering Descr
18	Stand-001
	Tool number:Stand-001
	Manufacturer code:KZ666
	Description for part:Work stand Descr
	Short name:Work stand
	Procurement data Technical data
	Quantity:1 Alternatives: - Tool

Procedure

1	Impacted zones:Zone 200 and Zone 300
2	S1
3	ELO-Box
4	Remove the lighting system from the packaging.
5	Make sure that the components in the package are the same as those on the S1000DLIGHTING-AAA-D00-00-01AA-941A-D
6	Install the light bulb to the front and rear lights (refer to \$1000DLIGHTING-AAA-D00-00-00AA-921A-A).
7	Attach the front light fitting on the top of the handlebar.
7.1	Apply the protective strip around the handlebar.
7.2	Pull the clamp open and put it around the protective strip with the light connector at the top.
7.3	Install the washer on the screw.

7.4	Use the correct screwdriver from the and tighten the screw into the hole at the bottom of the clamp. This safeties the clamp to the handlebar.
8	Attach the rear light fitting to the rear triangle of the bike frame.
8.1	Apply the protective strip around one of the two rear triangle up-tubes.
8.2	Pull the clamp open and put it around the protective strip. Make sure the light connector points rearwards.
8.3	Install the washer on the screw.
8.4	Use the correct screwdriver from the and tighten the screw into the hole at the bottom of the clamp. This safeties the clamp to the tube.
9	Attach the light with the white glass to the front connector.
10	Attach the light with the red glass to the rear connector.

¹ Make sure that the new bulb is not cracked.

Safety conditions

WARNING

Make sure that the bulb is cool before you replace it.

CAUTION Do not touch the glass of the bulb. CAUTION Make sure that the glass is clean before installing it on the light.

Procedure

1	From location on the handlebars, remove the glass Glass.
2	Remove the used front yellow bulb Bulb.
3	Discard the used bulb Bulb.
4	Remove the new white bulb Bulb from the kit Kit.
5	Install the new white bulb Bulb.
6	Install the glass Glass on the light.
7	Attach the light fitting on the handlebar.
8	Apply the protective strip around the handlebar.
9	Install the washer on the screw.
10	Use the special screwdriver Screwdriver from the toolset Special Toolset and tighten the screw into the hole at the bottom of the clamp. This safeties the clamp to the handlebar.
11	From location under the saddle Remove the glass Glass.
12	Remove the used yellow rear bulb Bulb.
13	Discard the used bulb Bulb.
14	Remove the new white bulb Bulb from the kit Kit.
15	Install the new white Bulb.
16	Drill a 4mm hole in the middle of the glass Glass in order to allow venting and heat evacuation when the light is switched on.
	The glass with the hole may be ordered independently with the reference Glass.

Applicable to: Mountain bicycle and (Mountain storm Mk1 or Brook trekker Mk9)

S1000DLIGHTING-AAA-D00-00-00-00AA-921A-A

17

Install the glass with the hole Glass on the light.

Requirements after job completion

Required conditions

Table 6 Required conditions

Action / Condition	Data module / Technical publication
Switch the lights on if necessary.
